EDUCATION

Concordia University

Bachelor of Software Engineering

Montreal, QC

Tentative Graduation: June 2028

EXPERIENCE

Software Engineer Intern

Shopify

– Incoming Software Engineer Intern.

Montreal, QC

Incoming Sept. 2026 - January 2027

Production Engineering Fellow

Meta x MLH Fellowship

- Selected for a competitive **12-week Site Reliability Engineering program** with mentorship from Meta production engineers, built on the Linux Foundation **LFS201** system administration curriculum.
- Built and deployed a full-stack web application from scratch using **Flask**, **MySQL**, **Docker**, and **NGINX** as a reverse proxy, isolating the web server, database, and proxy into separate containers.
- Implemented a **CI/CD pipeline** with automated **unit testing** and secret management, and provisioned cloud infrastructure on **DigitalOcean** via **Bash** automation scripts.
- Configured **monitoring and alerting** with **Grafana** and **Prometheus** to track container health, site uptime, and service availability.

Remote

June 2026 – September 2026

Software Engineer Intern

Bombardier Aerospace — Engineering Systems

- Improved **138 legacy HTML** files using **JavaScript**, **HTML**, and **CSS**.
- Led the creation of the **BES Roadmap 2027 Power BI Dashboard**, collaborating with **15+ Engineering Champions** to support the release of **300+ technical Bombardier manuals**.
- Built a data pipeline using **SQL** to organize **10,000+ records** into KPI dashboards for engineering stakeholders.
- Supported **BES 2.0 modernization** by documenting business rules, validating migrated data in test environments, and collaborating with IBM technical teams.
- Created internal tools using **Power Apps** and **Power Automate** in the **BES SharePoint** environment.
- Concurrently support the **Aviation Cybersecurity** team, contributing to Bombardier's cyber resilience initiatives across enterprise security domains.

Montreal, QC

January 2026 – August 2026

PROJECTS

WINNER - MLH Best Use of Solana (McHacks 13) | *Solana, Rust, Anchor*

[Live Demo](#) ↗

- Built a blockchain platform enabling artists to **mint and tokenize their creative identity** on the **Solana blockchain**.
- Designed and deployed **Rust + Anchor smart contracts** supporting on-chain minting, transfers, and transparent transaction history.

STARTUP - Gear-Pack | *Next.js 16, TypeScript, Tailwind CSS, Supabase, Custom AI Agent*

[Live Demo](#) ↗

- Coordinated group hikes and optimized gear packing using an **integrated AI assistant** with user-specific memory threads.
- Secured **PostgreSQL** backend via **Supabase** and **Prisma** to manage relational data.

TECHNICAL SKILLS

Languages: Java, TypeScript, Python, JavaScript, SQL, C, Bash

Libraries/Frameworks: React, Next.js, Flask, Docker, NGINX, Pandas, NumPy, MongoDB, UNIX/Linux

Tools/Concepts: Power BI, Power Apps, Power Automate, Grafana, Prometheus, GitHub Actions, Cybersecurity Fundamentals

Relevant Courses: OOP I, OOP II, Data Structures & Algorithms, OS, Data Analytics, Web Programming

ACHIEVEMENTS, LEADERSHIP & HOBBIES

Achievements: Winner of MLH Best Use of Solana @ MCHacks 13; Winner of Web3 Challenge @ ConUHacks; 3rd Place Overall @ Meta x MLH Production Engineering Hackathon

Leadership: Crew Chief & Sales @ Student Works, leading a team of 3–5 employees

Hobbies: Hiking, Fishing, Ultramarathon Running
